

ASF FIELD BRIEF

05 / 06

HUMAN CAPABILITIES

The people who answer the call.

Machines see everything and decide nothing. Software orchestrates what matters. The human layer is the judgment on top of both: licensed, vetted, continuously trained people who own Levels 4 through 7 of the ASF-7 model — from the first verified alert to the last person on the ground.

01 ON THE WATCH — THE ROLES THE CLIENT SEES

EXECUTIVE PROTECTION AGENT

High-risk executives, events, and travel — under the same command layer and audit trail as the rest of the Force.

UNARMED SECURITY AGENT

Licensed and vetted, on post and on patrol. Deters by presence — and makes the judgment calls no sensor can make.

AUGMENTED SECURITY AGENT

Any agent in the field, once equipped with the H1 wearable: the same eyes as the machines, the same verified alerts, the same picture as Mission Intelligence.

ARMED SECURITY AGENT

Firearm-qualified under state law, posted where the risk profile demands it. Restraint under authority: trained to carry, rarely needing to.

EMBEDDED SECURITY AGENT

On the client's premises every day, carrying the same license and Code — inside the operation, never absorbed by it.

AUGMENTED FIELD AGENT

One agent, three missions, one van: roving mobile patrol, quality assurance on every machine and post, and field service to fix the Force's machines on the spot.

02 BEHIND THE WATCH — MISSION OPERATIONS

The operational backbone of the Force. Four missions, one department, fully internal — no third parties between the Force and its clients. The client may never know their names but feels their work every day.

MISSION SUCCESS SPECIALIST

The client's standing point of contact once the Force goes live: outcomes reviewed, questions answered, adjustments made before the client has to ask.

MISSION INTELLIGENCE ANALYST & LEAD

The remote command layer. Analysts verify every alert against a digital twin of the site; Leads hold escalation authority — an accountable human in the loop, 24/7.

MISSION RELIABILITY SPECIALIST

Closes the technical loop from field anomaly to engineering fix: fewer false alarms, sharper patrols, faster response, every autonomous hour.

MISSION SERVICE TECHNICIAN

Regional leads and technicians with hands on the machines: deployment, maintenance, and repair, held to the same standard as any agent on post.

03 ONE FORCE, ONE CODE

I own the outcome.

I am the human in the loop.

I answer the call.

Every role above commits to the same three-part Code — and the company invests accordingly. Agents hold equity in Knightscope, Inc., receive full health benefits, and start paid training on day one. A career with a growing company, not a shift.

04 TRUST & VERIFICATION

American-owned and controlled. Publicly traded (NASDAQ: KSCP), U.S.-only operations. No foreign parent company.

Licensed and vetted. Every agent licensed in the state where they serve, screened beyond industry minimums.

Public-company governance. Audited financials, independent board — scrutiny no private guard firm faces.

One audit trail. Every action logged, timestamped, and exportable — across machines, software, and agents.

Tell us what you are accountable for, and we architect the Force — machines and people — built for your locations:
