KNIGHTSCOPE

RTX

RISK & THREAT EXPOSURE

REMOTE MONITORING, REINVENTED

RTX (Risk & Threat Exposure) is Knightscope's dedicated remote monitoring team that pairs human intelligence with machine precision, for better security at lower cost.

- Cut down false alarms and alert fatigue
- Reduce guard turnover and scheduling gaps
- Extend your security footprint without bloating your budget
- Improve response time and accountability

SECURITY PROGRAMS ARE STRAINED: HOW TO KEEP UP?

Security teams are drowning in alerts and stretched thin. Frontline staff are overwhelmed, understaffed, and often pulled into low-value tasks. Expanding guard staff costs too much, and they'll still miss critical threats. Meanwhile, traditional security vendors cut corners, relying on overworked schedulers or call center staff to "check the box."

RTX IS YOUR 24/7 VIRTUAL SECURITY TEAM

Reinventing the Model for Public Safety and Risk Management:

- **Smarter Monitoring:** Every alert reviewed, no "mark all as read." Our team triages live feeds, sends real-time updates, and takes action fast.
- **Human + Robot:** Robots handle the grunt work like foot patrols, late nights, and repetitive routes. Real humans step in when it counts.
- **Twice-Daily Reporting:** Clear, consistent updates on everything from alerts to machine uptime. No black box.
- **Rapid Response:** Avg. investigation time is about 2 hours (and dropping each week). Clients get hourly updates during active cases.

Expanded Capabilities:

- Emergency Communications to Local Law Enforcement Groups
- Public Address Broadcasts
- Robot Patrol Scheduling Adjustments
- Virtual Tours for Anomaly Detection
- Capabilities to Remotely Monitor Your Existing Video Management System (VMS)

RTX

RISK & THREAT EXPOSURE

READY TO RECLAIM YOUR TIME, CUT COSTS, AND SECURE SMARTER?

Painful security bloat ends with RTX. Knightscope's human-machine team watches every camera, reviews every alert, and jumps on real threats — fast — so you don't have to chase shadows.
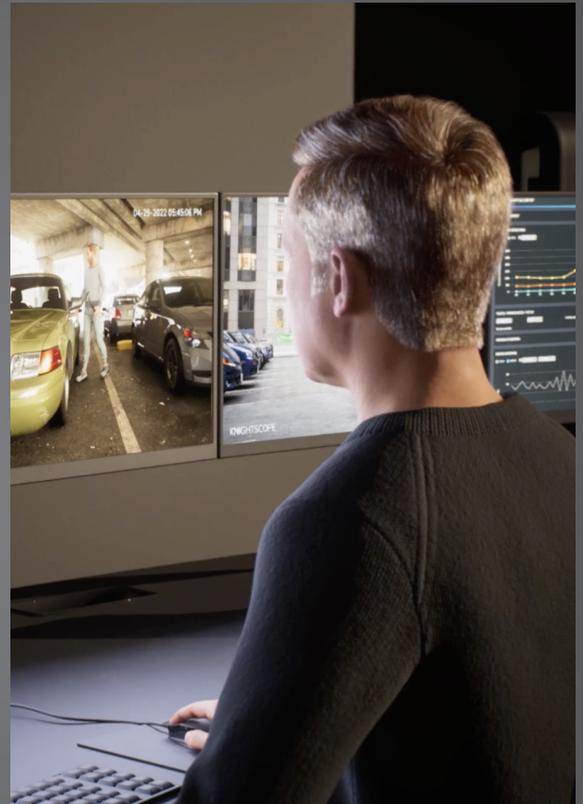

Robots patrol nonstop, spotting motion, heat, and noise that sleepy guards miss. Live analysts verify each alert in seconds, broadcast warnings, and escalate only what matters. The result: false alarms drop, response time averages two hours and keeps shrinking, and you pay $9–$11 an hour instead of $22–$50 for traditional guards.

Twice-daily reports give you a crisp snapshot of activity; a live dashboard shows robot routes and system health anytime. No black boxes, no busy signals — just instant clarity.

Because the robots handle graveyard shifts and repetitive rounds, you can move your best people to roles that need a human touch, boosting morale and retention. Clients stick around too: RTX has had both very strong client renewal rates and very low internal staff turnover since launch.

Deployment takes about a week. You keep your existing cameras, plug in the robots, and gain a 24/7 security nerve center that scales without bloating payroll.

Spend less, see more, sleep better — RTX turns alert chaos into a controlled, accountable shield for your property.

SPECIFICATIONS

$9-$11/hr (vs. $22-@50/hr for on-site guards)
12-24 Virtual Patrols Every Day
Twice Daily Reports
Very Strong Client Retention
Very Low Staff Turnover
